## Amendments to the Claims

1. (Original) A method of automatic initiation for connecting a mobile phone to a conference call, the method comprising:

in the mobile phone:

reviewing calendar event data stored in the mobile phone, the calendar event data containing conference call event data that includes a starting time for the conference call, a telephone number for the conference call, and a passcode authorizing connection to the conference call;

automatically producing an alert shortly before the starting time of the conference call;

displaying a prompt asking whether to connect to the conference call; automatically dialing the telephone number for the conference call upon an affirmative response to the prompt asking whether to connect to the conference call;

receiving a prompt for the passcode authorizing connection to the conference call;

obtaining the passcode from the conference call event data; and automatically entering the passcode.

 (Original) The method of claim 1 wherein the affirmative response to the prompt asking whether to connect to the conference call is in the form of a keypress on the mobile phone keypad.

- 3. (Original) The method of claim 1 wherein the affirmative response to the prompt asking whether to connect to the conference call is in the form of a keyword voice response that is recognized by the mobile phone in a voice activated mode.
- 4. (Original) A system for automatic initiation for connecting a mobile phone to a conference call, the system comprising:

in the mobile phone:

means for reviewing calendar event data stored in the mobile phone, the calendar event data containing conference call event data that includes a starting time for the conference call, a telephone number for the conference call, and a passcode authorizing connection to the conference call;

means for automatically producing an alert shortly before the starting time of the conference call;

means for displaying a prompt asking whether to connect to the conference call;

means for automatically dialing the telephone number for the conference call upon an affirmative response to the prompt asking whether to connect to the conference call;

means for receiving a prompt for the passcode authorizing connection to the conference call;

means for obtaining the passcode from the conference call event data; and means for automatically entering the passcode.

- 5. (Original) The system of claim 4 wherein the affirmative response to the prompt asking whether to connect to the conference call is in the form of a keypress on the mobile phone keypad.
- 6. (Original) The system of claim 4 wherein the affirmative response to the prompt asking whether to connect to the conference call is in the form of a keyword voice response that is recognized by the mobile phone in a voice activated mode.
- 7. (Currently amended) A computer program product <u>embodied on a computer readable storage medium</u> for automatic initiation for connecting a mobile phone to a conference call, the computer program product comprising:

in the mobile phone:

computer program code for reviewing calendar event data stored in the mobile phone, the calendar event data containing conference call event data that includes a starting time for the conference call, a telephone number for the conference call, and a passcode authorizing connection to the conference call;

computer program code for automatically producing an alert shortly before the starting time of the conference call;

computer program code for displaying a prompt asking whether to connect to the conference call;

computer program code for automatically dialing the telephone number for the conference call upon an affirmative response to the prompt asking whether to connect to the conference call;

computer program code for identifying a received prompt for the passcode authorizing connection to the conference call;

computer program code for obtaining the passcode from the conference call event data; and

computer program code for automatically entering the passcode.

- 8. (Currently Amended) The computer program product <u>embodied on a computer readable</u> <u>storage medium</u> of claim 7 wherein the affirmative response to the prompt asking whether to connect to the conference call is in the form of a keypress on the mobile phone keypad.
- 9. (Currently Amended) The computer program product <u>embodied on a computer readable</u> <u>storage medium</u> of claim 7 wherein the affirmative response to the prompt asking whether to connect to the conference call is in the form of a keyword voice response that is recognized by the mobile phone in a voice activated mode.
